Abstract

This project is about a web based shopping system for an existing platform . The project's main objective is to deliver the online shopping application into android platform. This project is an attempt to provide the advantages of online shopping to customers for a real shopping experience. Users will be able to purchase laptops, Mobile, Electronic Items, Food items, Clothing Items, Vegetables, Fruits, Stationary etc. Users will be able to add items. Users will be able to reduce the quantity or delete the item. Users will be able to print the bill. Approach Firstly a menu will be displayed to the customer. After the selection, all the products with their prices will be displayed. Then the customer will select the products and chooses the quantity. The customer will be able to increase or decrease the number of items. This provides people to available process continues until the shopping is completed. Whenever the customer completes his shopping, the items, quantity, cost, and finally the total amount to be paid are displayed on the screen along with discount provided. The main goal of this program is to make shopping easier to every customers,for complete and best shopping experience.
